

Energy monitoring device

The project will utilise an energy monitoring device from Wattwatchers, an Australian company. The device will be installed inside the switchboard by electricians from Sustainability Wise, under the supervision of their head contractor, Johnny.

What we need from you

To help Johnny assess the work required and ensure he arrives on-site fully prepared, we need two photos of your switchboard.

Please text these photos to 0499 976 922. If you send the photos from the mobile number provided in your registration form, there's no need to include an accompanying message.

One **high resolution** photo at a distance to show the area around the switchboard for context. Ideally with door wide open.

One **high resolution** photo close-up of the switchboard with the labels and the ratings of the breakers is clearly visible when zooming in. Ideally the whole board (not cropped).

Before and after installation (inside switchboard)

After the installation you will be emailed a Certificate of Electrical safety. Note this example is for Victoria. (NSW, QLD, and NT authorities apply in those locations)

Certificate of Electrical Safety
Non-Prescribed Electrical Installation Work
Electricity Safety Act 1998, Electricity Safety (General) Regulations 2019

energysafe
VICTORIA
